

Continues Integration (SB5-MAI)

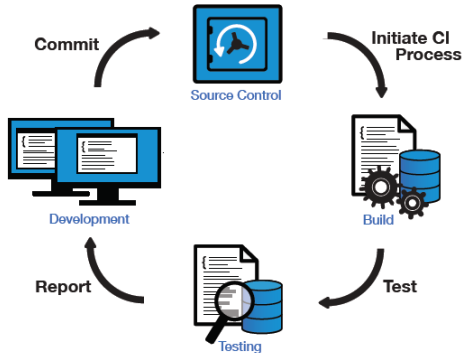

Jan Corfixen Sørensen

University of Southern Denmark

October 7, 2017

Continuous Integration

- ▶ Continuous Update for the whole software process
- ▶ Teams integrate their work multiple times per day
- ▶ Each integration is verified by an automated build
- ▶ Significantly reduces integration problems
- ▶ Develop cohesive software more rapidly

Five Principles of Continuous Integration

- ▶ Environments based on stability
- ▶ Maintain a code repository
- ▶ Commit frequently and build every commit
- ▶ Make the build self-testing

Continuous Integration

- ▶ Create server environments to model code stability
- ▶ Promote code to stricter environments as quality improves

Commit Frequently Build Every Commit

- ▶ Change your habits
 - ▶ Commit small, functional changes
 - ▶ Unit tests!
 - ▶ Team owns the code, not the individual

The code builds on my box...

- ▶ Source code repository is the source of record
- ▶ Build server settles disputes
 - ▶ Only gets code from Repo
- ▶ Build server the final authority on stability/quality

Build every commit

- ▶ Why compile frequently?
- ▶ Agile principles
 - ▶ If it hurts, do it more often
 - ▶ Difficult activities can be made more straightforward by doing them more frequently
 - ▶ Reduce time between defect introduction and removal
- ▶ Automate the build

Add testing to build

- ▶ Individual programmers $< 50\%$ efficient at finding their own bugs
- ▶ Multiple quality methods lead to more defects discovered
 - ▶ Use 3 or more methods for $> 90\%$ defect removal
- ▶ Most effective methods
 - ▶ Design inspections
 - ▶ Code inspections
 - ▶ Testing

Self Testing Builds

- ▶ System Tests
 - ▶ End-to-end test
 - ▶ Often take minutes to hours to run
- ▶ Unit tests
 - ▶ **Fast:** No database or file system
 - ▶ **Focused:** Pinpoint problems
 - ▶ Best method for verifying builds

Automated Quality with Continuous Integration

- ▶ Static code analysis
 - ▶ Looks for common java bugs (Findbugs, PMD)
 - ▶ Check for code compliance (Checkstyle)
- ▶ Unit test analysis
 - ▶ Measure coverage (Cobertura)
 - ▶ Look for hotspots, areas of low testing and high complexity (SONAR)

Build Server Hardware

- ▶ Maven and Java = lots of memory
- ▶ Compile and unit test = lots of CPU
- ▶ Static analysis = lots and lots of CPU
- ▶ **Please, KEEP IT FAST**

Free Continuous Integration Servers

- ▶ Hudson (Oracle)
 - ▶ Self updating and easy to administor
 - ▶ Many useful plugins
 - ▶ Great user interface
 - ▶ Scale out with additional nodes
 - ▶ Best by a wide margin
- ▶ Cruise Control (ThoughtWorks)
 - ▶ Yucky XML configuration
 - ▶ Commercial version (Cruise) is a rewrite Continuum (Apache)
 - ▶ Great Maven support
 - ▶ No plugins, ok user interface, and slow builds

Jenkins for Continuous Integration

- ▶ Jenkins – open source continuous integration server
- ▶ <http://jenkins-ci.org>
 - ▶ Easy to install
 - ▶ Easy to use
 - ▶ Multi-technology
 - ▶ Multi-platform
 - ▶ Widely used
 - ▶ Extensible
 - ▶ Free

Jenkins

Jenkins for a Developer

- ▶ Easy to install
 - ▶ Download one file – jenkins.war
 - ▶ Run one command – java -jar jenkins.war
- ▶ Easy to use
 - ▶ Create a new job – checkout and build a small project
 - ▶ Check-in a change – watch it build
 - ▶ Create a test – watch it build and run
 - ▶ Fix a test – check-in and watch it pass
- ▶ Multi-technology
 - ▶ Build C, Java, C#, Python, Perl, SQL, etc.
 - ▶ Test with Junit, Nunit, MSTest, etc.

More Power – Jenkins Plugins

- ▶ Over 300 plug-ins
 - ▶ Software configuration management
 - ▶ Builders
 - ▶ Test Frameworks
 - ▶ Virtual Machine Controllers
 - ▶ Notifiers
 - ▶ Static Analyzers

Jenkins: Version Control Systems

- ▶ Accurev, Bazaar, BitKeeper, ClearCase, Darcs, Dimensions, Git, Harvest, MKS Integrity, PVCS, StarTeam, Subversion, Team Foundation Server and Visual SourceSafe

Jenkins: Build Tools

- ▶ Ant
- ▶ Maven
- ▶ MSBuild
- ▶ Cmake
- ▶ Gradle
- ▶ Grails
- ▶ Scons
- ▶ Groovy

Jenkins: Test Frameworks

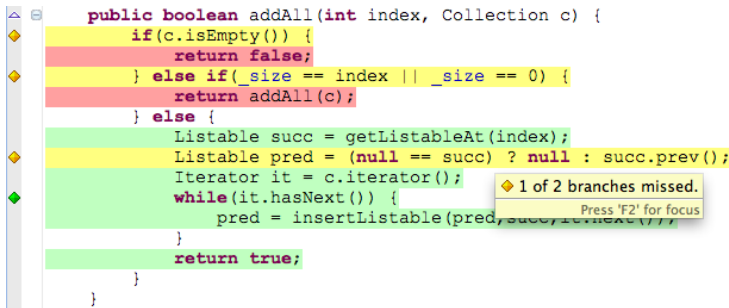

- ▶ Junit
- ▶ Nunit
- ▶ MSTest
- ▶ Selenium
- ▶ Fitnessse

Jenkins: Static Analysis

- ▶ Checkstyle
- ▶ CodeScanner
- ▶ DRY
- ▶ Crap4j
- ▶ Findbugs
- ▶ PMD
- ▶ Fortify
- ▶ Sonar
- ▶ FXCop

Jenkins: Code Coverage

```
public boolean addAll(int index, Collection c) {  
    if(c.isEmpty()) {  
        return false;  
    } else if(_size == index || _size == 0) {  
        return addAll(c);  
    } else {  
        Listable succ = getListableAt(index);  
        Listable pred = (null == succ) ? null : succ.prev();  
        Iterator it = c.iterator();  
        while(it.hasNext()) {  
            pred = insertListable(pred, succ, it.next());  
        }  
        return true;  
    }  
}
```

1 of 2 branches missed.
Press 'F2' for focus

- ▶ Emma
- ▶ Cobertura
- ▶ Clover
- ▶ GCC/GCOV

Jenkins: Other Tools

- ▶ Notification

- ▶ Twitter
- ▶ Campfire
- ▶ Google Calendar
- ▶ IM
- ▶ IRC
- ▶ Lava Lamp
- ▶ Sounds
- ▶ Speak

- ▶ Authorization

- ▶ Active Directory
- ▶ LDAP

- ▶ Virtual Machines

- ▶ Amazon EC2
- ▶ VMWare
- ▶ VirtualBox
- ▶ Xen
- ▶ Libvirt
